Data Sheet

## ES-FC20MD-25M& ES-FC25MD-25M

### Features

#### Size Options:

- **20mm/25mm:** This indicates that the conduit comes in two size options - either 20mm or 25mm in diameter. The user can choose the size based on the specific requirements of their electrical wiring.
- **PVC (Polyvinyl Chloride):** PVC is a common material used for conduits. It is known for its durability, resistance to corrosion, and cost-effectiveness.
- **CORRUGATED CONDUIT:** This suggests that the conduit has a corrugated or ribbed structure. Corrugated conduits are flexible and provide additional protection to the enclosed wires.
